HIV/AIDS TREATMENT PLAN

Selected government hospitals provide Antiretroviral (ARV) treatment. More than 400,000 people need ARV treatment in our country.

HIV/AIDS becomes

a lifelong Illness we can manage if we have: ARV treatment, good nutrition, a healthy lifestyle, timely treatment of opportunistic illnesses and regular use of condoms.

Build treatment

literacy: Learn the science of HIV, its treatments and demand your rights.

Mobilise your

COMMUNITY to access HIV testing, CD4 counts, prevention and treatment while immune systems are still healthy.

Work to ensure at least

200,000 people have treatment by 2006. Government must support more health centers with financial and human resources to provide HIV/AIDS treatment, care and management.
